

OEM-GRADE™ Converter Series

TECHNICAL
FEATURE
ASSIGNMENTS

EPA Compliant Series

High oxygen storage capacity

High precious metal loading

Ultra-low emissions compatibility

Optimum active material dispersion

Enhanced thermal stability

OEM-grade™ catalytic converters are formulated with the highest levels of precious metals, along with the most thermally durable active elements. These catalytic converters are engineered to function with Ultra Low Emissions Vehicle (ULEV) OBDII specific vehicle applications: ensuring ultra-low level tailpipe emissions compliance, engine management compatibility, satisfaction of onboard diagnostic catalyst efficiency codes and conclusively keeping the “check engine light” off.

**Industry leading levels of
precious metal catalyst loading**

ULEV emission vehicle compatibility

- » Adaptable to broad air/fuel ratio ranges
- » Low thermal mass with rapid light off
- » Extended thermal stability and durability
- » Optimized active material catalyst surface

**EPA and OBDII compliant
catalyst formulation**

**Enhanced high oxygen
storage capacity**

- » Stainless steel housing
- » Larger catalyst volumes for improved gas residence times
- » Durable constituent composition

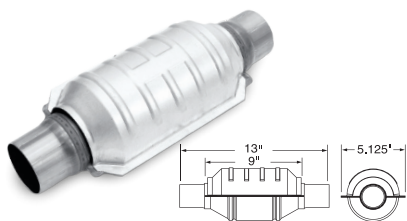

NOT FOR SALE IN CALIFORNIA AND OTHER STATES THAT REQUIRE CALIFORNIA AFTERMARKET CATALYTIC CONVERTERS
